❑ CONTAINER LOADING SUPERVISION (CLS)

- Advantages
- Execution of CLS
- Where it takes place?
- When it is useful?

❑ FUNCTION OF CONTAINER LOADING SUPERVISION (CLS)

- Loading information
- Specification, labeling & packaging
- Conformity of products
- Container Loading Check

INTRODUCTION

- Container loading is a critical step of action in the shipment process.
- Even if the products are of good quality, damages to the products takes place if they are not loaded properly.
- Thus, the loading process should be in such a way that it should not affect the product at any stage of loading.
- To avoid the product damage and to safeguard the product during loading process, container loading supervision takes place.

CONTAINER LOADING SUPERVISION(CLS)

- CLS is carried out to ensure total quantity of products are loaded securely & safely without any damage.
- CLS helps to know,
 - Total quantity of goods packed.
 - What exactly is loaded in the container.
 - Loading/unloading process for minimize breakage and maximize space utilization.
 - Packaging/package method.
 - Container condition & its details.

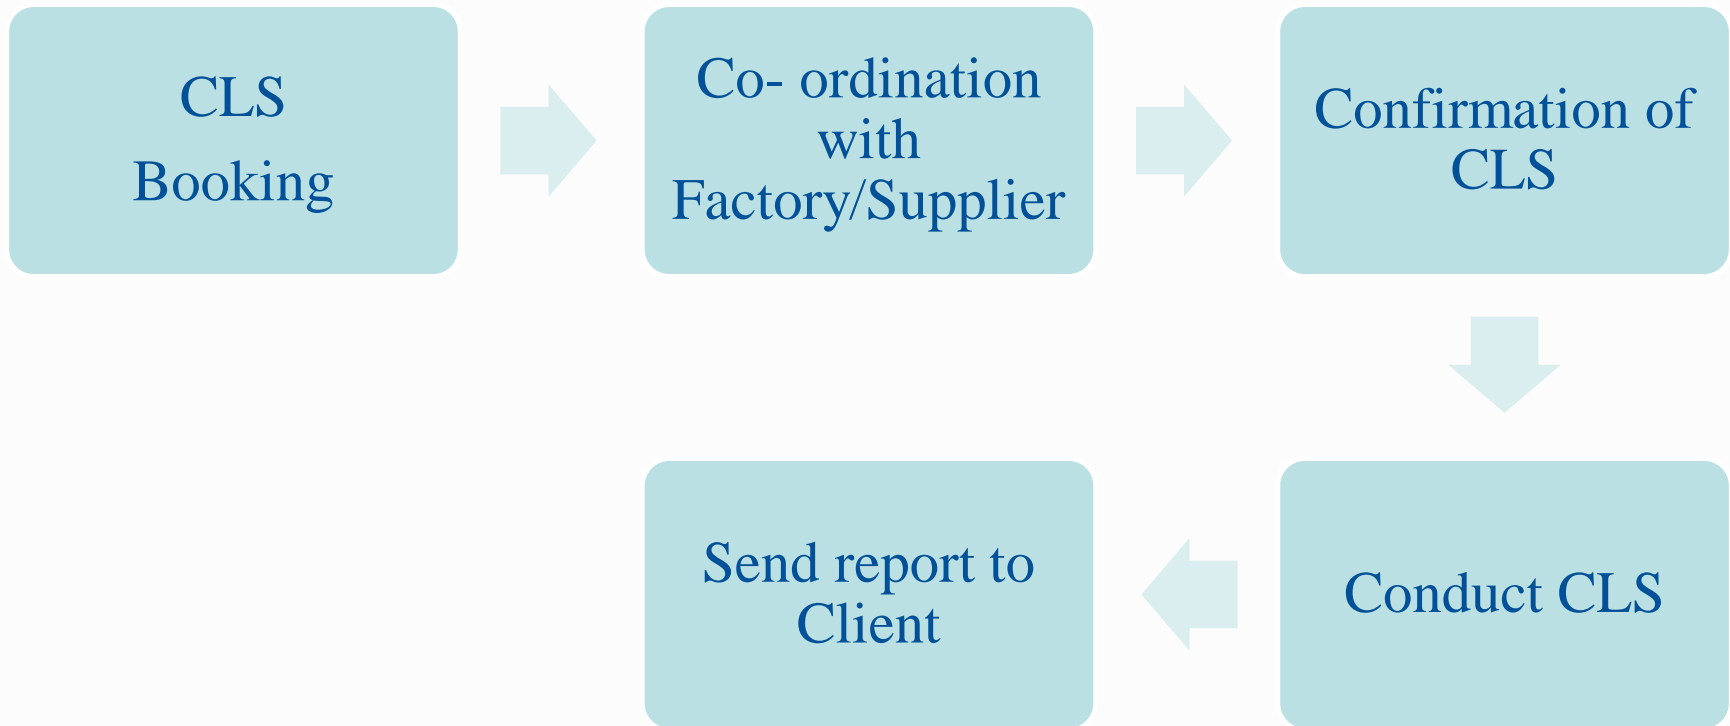

Advantages

- Ensure whole production is shipped.
- Verify the correct quantity has been loaded.
- Get goods loaded with care.
- Know the condition of containers.

Execution of CLS

Where it takes place?

- Container Loading
Supervision will takes place right in front of the vendor / factory / manufacturer / forwarding party premise
While load the goods inside the container.
- This inspection takes place at the factory or at forwarding party's premises.

When is it useful?

- Container loading supervision is useful for all shipments, which is exporting via sea shipment.
- It is useful for various type of shipment packing such as Carton or Box packing, Hanging container packing, Roll packing, Pallet packing etc.
- It is useful for all type of products such as Home furnishing , Apparels, Hard goods, Electrical & electronics etc
- Moreover it is most important to leather product where chances of damage to product(fungus) is more during transmission due to wet condition of sea.
- When outer packing is used as retail packing.

Export Destination	India		
INSPECTION RESULTS			
CRITERIA	RESULTS	REMARKS	
A: Container Loading Check	Conformed	-	
B: Loading Information	Pending	Remark # 5	
C. Workmanship Summary	Conformed	-	

A. Loading Information

- The loading information helps to know,
 - Requested shipment quantity
 - Loaded quantity/styles
 - Loaded cartons quantity
 - Container number

B. Specification, Shipment & Packing

- This method gives a detailed information about the product and carton/box. It also includes,
 - Shipping mark
 - Unit packing
 - Inner/outer packing
 - Color
 - Logo
 - Weight

C. Conformity Of Products

- The objective is to ensure that right kind of goods is shipped out.
- The Inspector may ask the exporter to open a few boxes/cartons to basic check whether the product and its inner packing are up to the mark & packed as per requirement.
- This helps to avoid replacement of goods or wrong package.

D. Container Loading Check

-Before Loading

- Container loading check helps to know that each empty container is fully inspected on the exterior and interior to verify the physical integrity of the container structure.
- The container should be
 - ✓ Clean
 - ✓ Dry
 - ✓ Free of odor, crack and rust
 - ✓ No hole or potential leakage

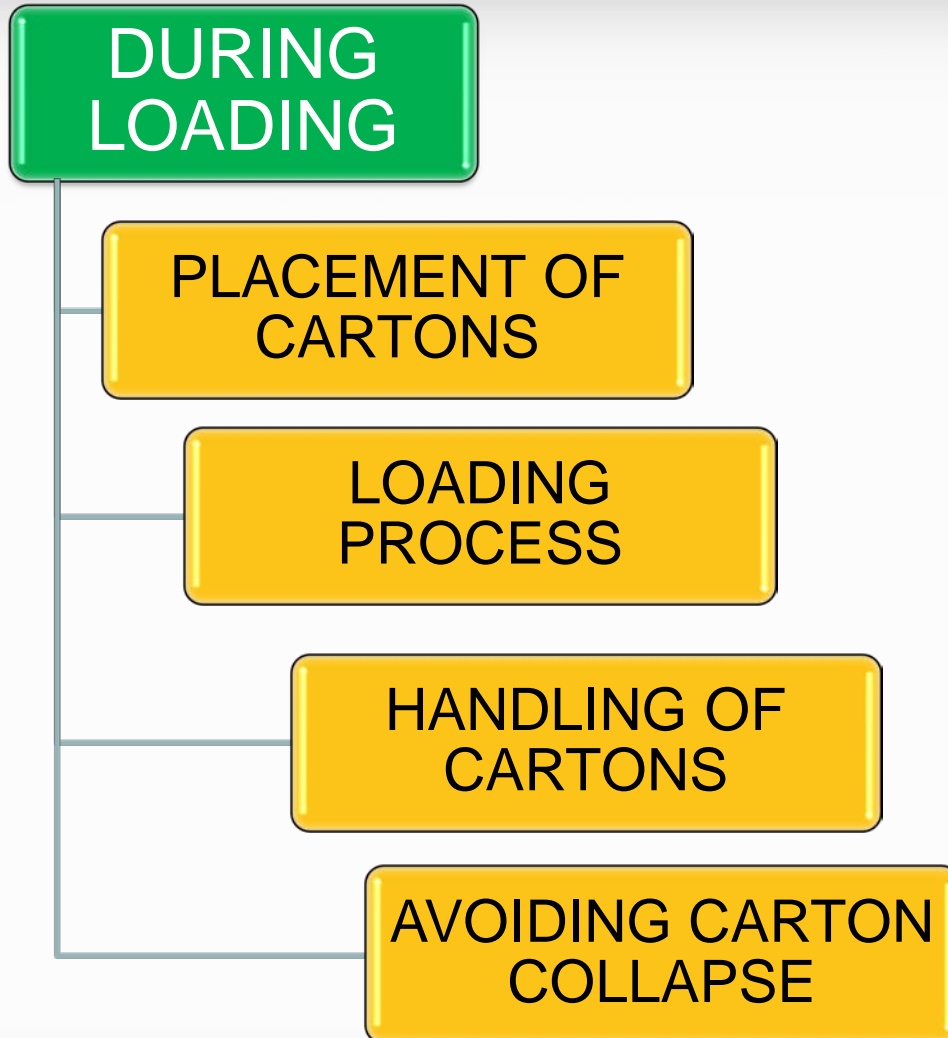

D. Container Loading Check - 7 Point Check

- In addition to this a 7 point check is carried out for each container. The 7 point inspection are as follows
 - ✓ Ceiling Roof
 - ✓ Front Wall
 - ✓ Left side
 - ✓ Floor (Inside)
 - ✓ Outside/Undercarriage
 - ✓ Inside & Outside door
 - ✓ Right Side

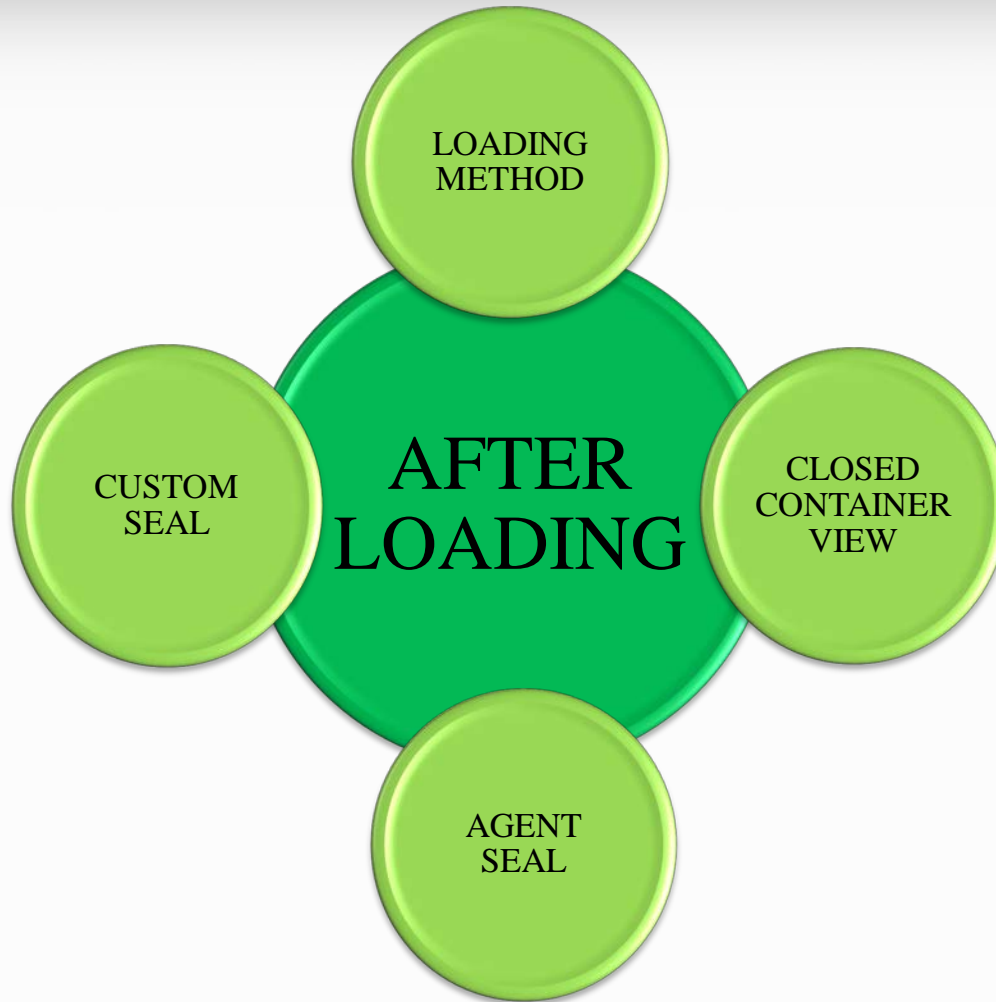

D. Container Loading Check - During Loading

D. Container Loading Check

-After Loading
